Within the compilation of the internet-database WTaxa (<http://wtaxa.csic.es/>), collecting all family- genus- and species group names of Curculionoidea, our colleague M.Á. Alonso-Zarazaga discovered a primary homonym: *Otiorhynchus incisus* Białooki, Germann & Pelletier, 2015 described from the Rif mountains in northern Morocco (Białooki et al. 2015). It was Jean-Xavier Hyacinthe Montrouzier (1820-1897), a French missionary, member of the "Société Impériale d'agriculture, histoire naturelle et arts utiles de Lyon" and member of the "Société Linnéenne de Lyon" who described in 1855 (Montrouzier 1855: 50) a certain *Otiorhynchus incisus* from Woodlark or Muyua - an island in the Solomon Sea belonging to Papua New Guinea. The species nowadays belongs to the genus *Strotus* Marshall, 1956, which is endemic on Woodlark.

Hence we replace the species' name with the following one: *Otiorhynchus (Lixorrhynchus) incisirostris* Białooki, Germann & Pelletier, 2017 **nom. nov.**

Acknowledgements

We cordially thank Miguel Ángel Alonso-Zarazaga (Spain, Madrid) for sharing his discovery with us.
